For the most precise assembly of the chair please follow the instructions below:

- Attach the legs to the seat with the 4 long screws (Part #A5) by fastening with the Allen wrench (Part #A4) provided within the hardware envelope. Make sure they are fully securing the legs to the bottom seat.
- Place the chair right side up and have a seat. Look down toward where the smaller screw (Part #A6) is supposed to meet the thread, you will notice that there is a small gap between the seat and the bracket. Use this small gap to align the smaller screw (Part #A6) to the thread, using the Allen wrench (Part #A4).
- While sitting gently push outward from the inside of the seat to close the gap.
- When you feel the screw meet the thread turn the screw until you feel it catch on to the thread, and tighten completely with the Allen wrench (Part #A4). Repeat this step for the other side as well.
- Place screw caps (Part #A3) over the A6 screws previously inserted for a smooth finish.
